GenAI Engineer | Agentic AI, Multi-Agent & RAG Systems

Specialist Programmer (L1) in the Infosys TOPAZ unit with about two years of experience building production-grade Generative AI, agentic AI, multi-agent and RAG systems with LangGraph, LangChain and Azure AI services. I design scalable, event-driven AI architectures (Azure Service Bus, GCP Pub/Sub), optimise prompts with DSPy, and work directly with client stakeholders on requirements, demos and delivery. Winner of the Google Cloud & Infosys TOPAZ Enterprise AI Co-Innovation Buildathon 2026.

Experience

Specialist Programmer (L1), Infosys · TOPAZ unit

Bengaluru | Sep 2024 – Present

- Build production multi-agent, agentic and RAG systems for enterprise clients with LangGraph, LangChain and Azure AI services.
- GenAI Developer on the Audit AI Framework for a Big Four audit client (Feb 2025 – Sep 2026); see Projects.

Research Intern, TiHAN · IIT Hyderabad

Hyderabad | Jan 2024 – Jul 2024

- Implemented obstacle avoidance and path planning for UAVs using a stereo depth camera and 3D LiDAR.
- Set up cloud-based ArUco marker detection for drones with a custom-trained YOLO model.
- Built a drone chatbot for autonomous navigation from natural-language commands.

Projects

Audit AI Framework · Big Four audit client

GenAI Developer | Feb 2025 – Sep 2026

A production multi-agent audit-automation platform. Auditors upload supporting documents and the sample selection in one submission; after file validation, Classification, Extraction, Availability, Vouching and Output agents identify each document, structure it, map samples to evidence, test the evidence against the selected procedure, and write an Excel report. I worked primarily on the Availability and Classification agents.

- Engineered a Corrective RAG (CRAG) architecture with hybrid search and semantic reranking on Azure AI Search for sample-to-document matching, cutting matching time by 60% at over 90% accuracy.
- Optimised audit-document classification prompts systematically with DSPy, improving classification accuracy by 30%.
- Built a Reviewer agent that evaluates agent outputs and automatically refines flagged responses, improving output accuracy by up to 30%.
- Developed agentic workflows with LangGraph and LangChain, integrated with Azure AI Services.
- Re-architected a polling-based system into an event-driven architecture on Azure Service Bus, improving overall responsiveness.
- Collaborated directly with client audit stakeholders on requirements, demos and delivery.

`Python, LangChain, LangGraph, DSPy, Azure AI Search, Azure AI Services, Azure Service Bus, CRAG, Hybrid Search, Semantic Reranking, Prompt Engineering, Multi-Agent Orchestration`

GemLearn · AI-powered adaptive corporate training

Lead Developer, 2-member team | May 2026 | Google Cloud & Infosys TOPAZ Enterprise AI Co-Innovation Buildathon 2026

Turns raw enterprise documents (PDFs, specs, runbooks, slide decks) into role-personalised, difficulty-graded training modules with lessons, quizzes, mind-maps, timed final exams and verifiable certificates.

- Won first prize in the Learning & Development category.
- Designed a five-stage Gemini orchestration pipeline that converts multi-format documents into role-personalised, difficulty-graded lessons, quizzes, mind-maps and exams.
- Implemented grounding validation that scores every module, with automated policy, quiz and diagram checks before human review.
- Built cost-aware model routing between Gemini 2.5 Pro and Flash, gating RAG at a 50,000-token threshold to control inference spend.
- Implemented source-grounded RAG on BigQuery Vector Search, from a few pages to large multi-file corpora.
- Designed an event-driven architecture on Cloud Pub/Sub with 6 asynchronous worker topics, so long-running generation never blocks the user or the API; deployed containerised services on Cloud Run with independently autoscaling workers.

- Built FastAPI services with JWT and Firebase Auth, using Firestore for real-time notifications and progress tracking.
- Generates base content for a 28-lesson course in about 2–3 minutes; one upload yields up to 4 default roles across 3 difficulty tiers, plus up to 5 custom roles; sustains about 65 in-flight jobs at a 5-instance floor, with 80 concurrent requests per API instance.

`Python 3.14, FastAPI, Gemini 2.5 Pro & Flash, BigQuery Vector Search, Cloud Pub/Sub, Cloud Run, Cloud Storage, Firestore, Docker, Next.js, TypeScript, JWT, Firebase Auth, RAG, Model Routing`

Multi-Agent Chat Platform

Feb 2025

- A web chat with one conversation thread shared across agents: a default agent handles standard turns and @mention routing hands off to specialised agents.
- The orchestrator injects shared history into each agent's system prompt, so every agent stays context-aware without private state; extensible agent registry with per-agent model endpoints and system instructions.

Emotional Text-to-Speech · Info-Clips · Auto-Narrated Audiobook

2023 – 2024

- Fine-tuned a Tacotron TTS model to generate contextually emotional speech from text (Python, TensorFlow).
- Info-Clips: a UI that turns a YouTube URL into a 3–4 line NLP summary (Python, Django, YouTube API).
- Auto-Narrated Audiobook: converts printed books into audio for visually impaired readers by combining OCR and TTS (Python, Django).

Achievements

- Winner, Google Cloud & Infosys TOPAZ Enterprise AI Co-Innovation Buildathon 2026 (Learning & Development category)
- Infosys TOPAZ Insta Award 2026
- Participant, Stanford AI Hackathon and STG Hackathon

Certifications

- Google Cloud Certified – Generative AI Leader
- AWS Certified AI Practitioner
- Anthropic Claude Certified Architect – Foundations
- GitHub Copilot (GH-300), GitHub Foundations (GH-900), GitHub Advanced Security (GH-500)
- Infosys Skill Tag: AI Professional

Skills

AI & GenAI	LangGraph, LangChain, DSPy, RAG, Corrective RAG, Hybrid Search, Semantic Reranking, Multi-Agent Orchestration, Model Routing, Prompt Engineering, Context Engineering, MCP
LLMs	Google Gemini, Azure OpenAI, Anthropic Claude
Cloud	Azure (Microsoft Foundry, OpenAI Service, AI Search), GCP (BigQuery, Pub/Sub, Cloud Run)
Messaging	Azure Service Bus, GCP Pub/Sub
Data	Azure AI Search, BigQuery Vector Search, SQLite
Backend	Python, SQL, FastAPI, Flask
Monitoring	Azure Monitor, App Insights, Log Analytics
Tools	Git, GitHub, GitHub Copilot, Docker, Windows, Linux

Education

B.Tech in Computer Science and Engineering

MVGR College of Engineering, Vizianagaram | 2020 – 2024 | CGPA 8.46 / 10

Intermediate, Board of Intermediate Education, Andhra Pradesh

Aditya Junior College, Kakinada | 2018 – 2020 | 9.94 / 10
